

Architecture: Setting up Your Auth0 Tenant

Introduction

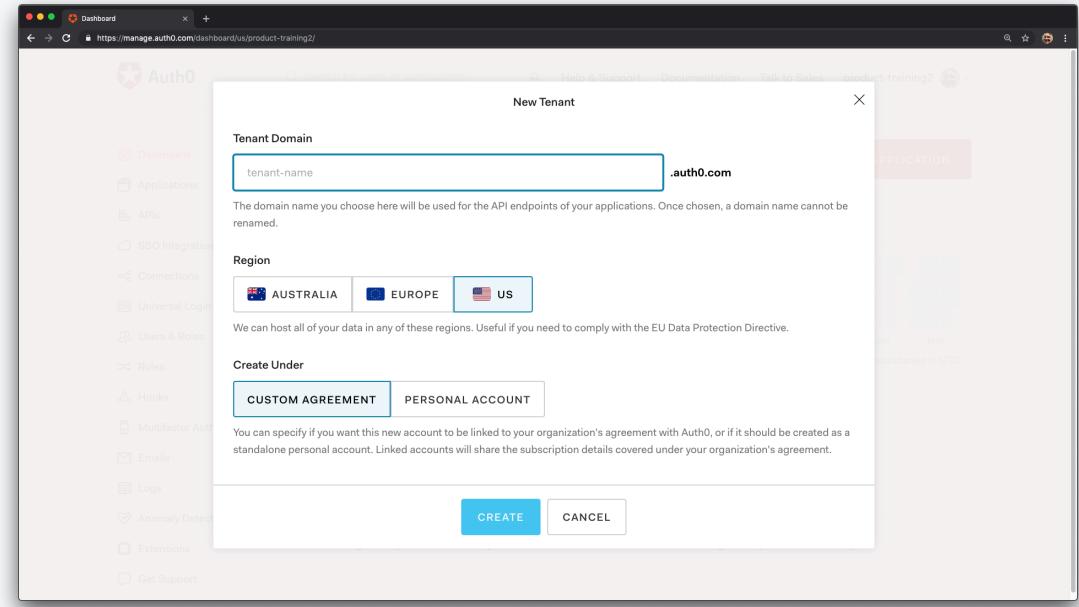

Auth0 Tenant

- What is it?
- How to configure?
- How many are needed?
- How to fit SDLC?

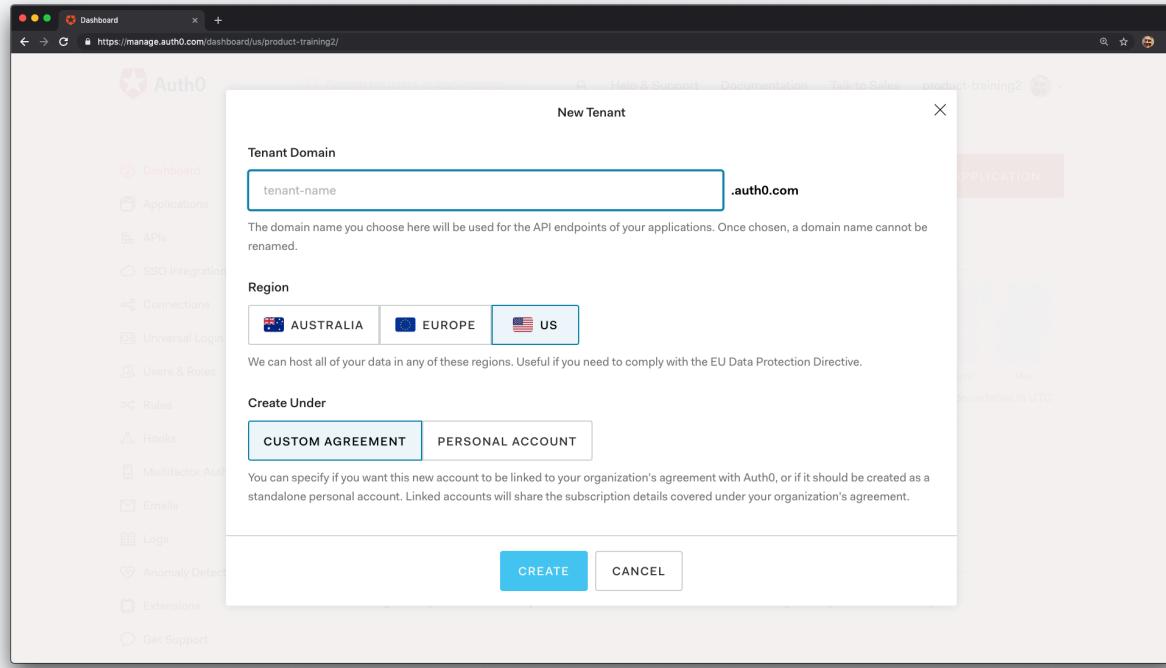

Auth0 Tenant Considerations

- Naming
- Custom Domains
- Additional Admins
- Auth0 Accounts

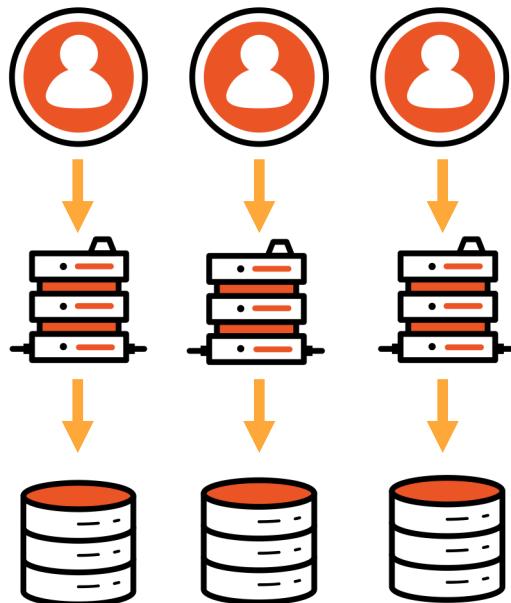

New Tenant Creation

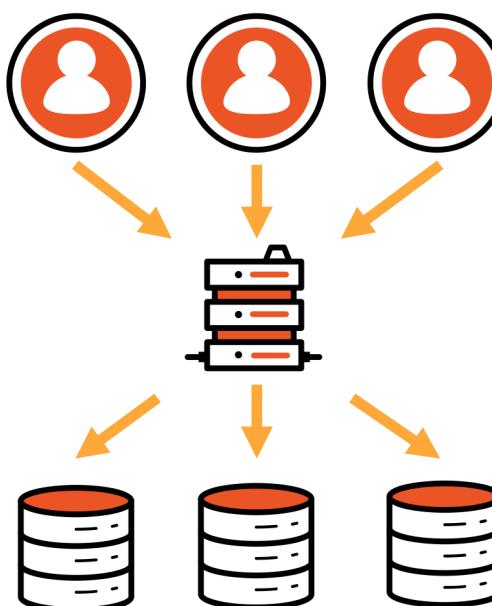

Single Tenant

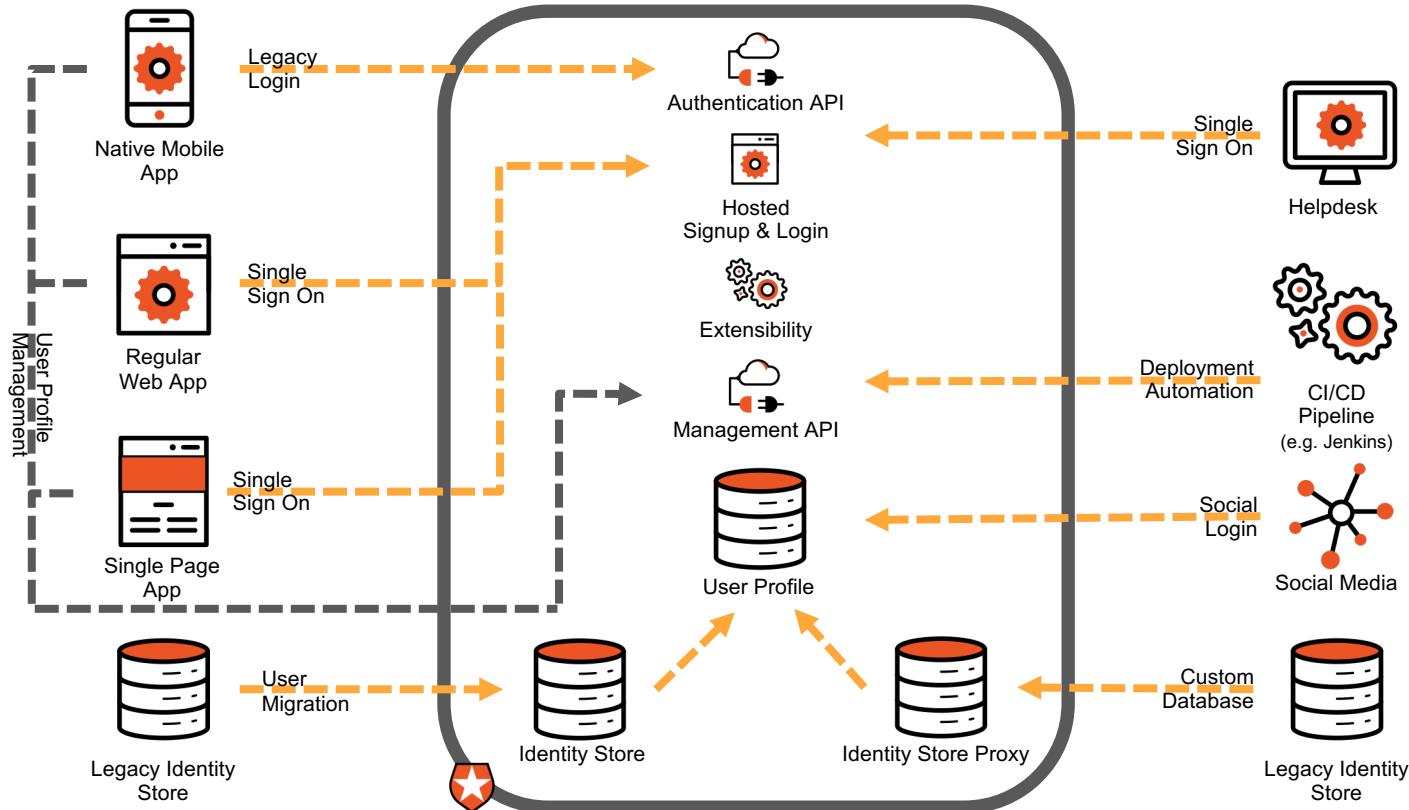

Separate Applications,
Separate Database

Multi Tenant

Same Applications,
Separate Database

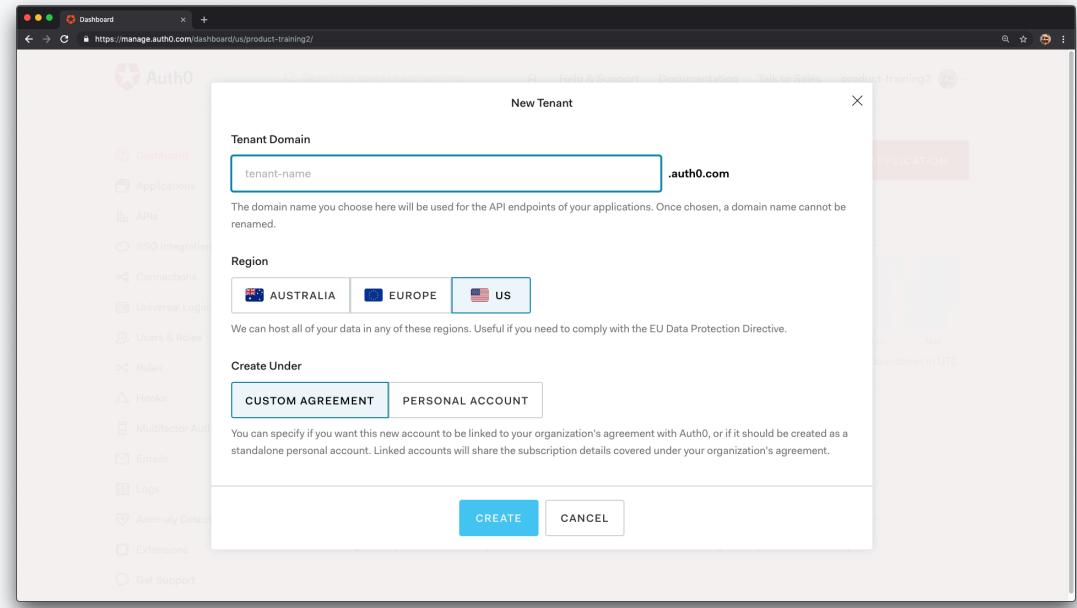

Your Infrastructure

- Constraints
- Departments
- Goals

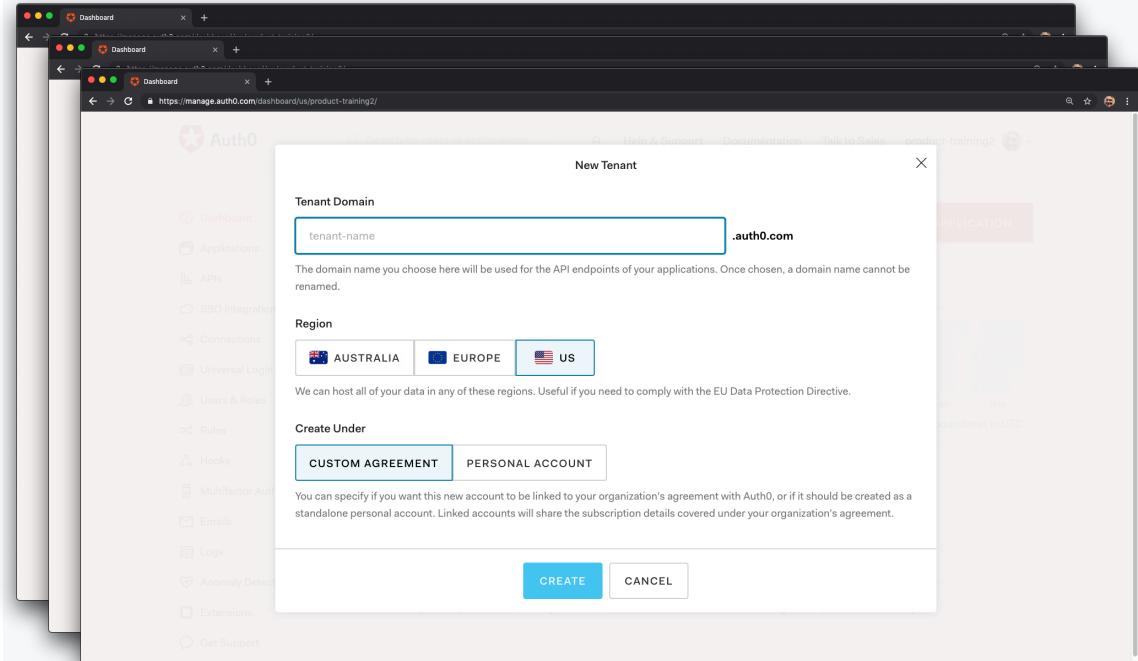

Feature Considerations

- Single Sign On
- Profile Management
- Billing

Number of Tenants

- Different User Communities
- Deployment Environments

User Communities

- Customers
- Partners
- Employees

Organization

- Sales
- Support
- Shipping

Customers

Employees

Development

Quality Assurance

Production

Development

Production

company-dev

company-qa

company-prod

company-sandbox-1

company-sandbox-2

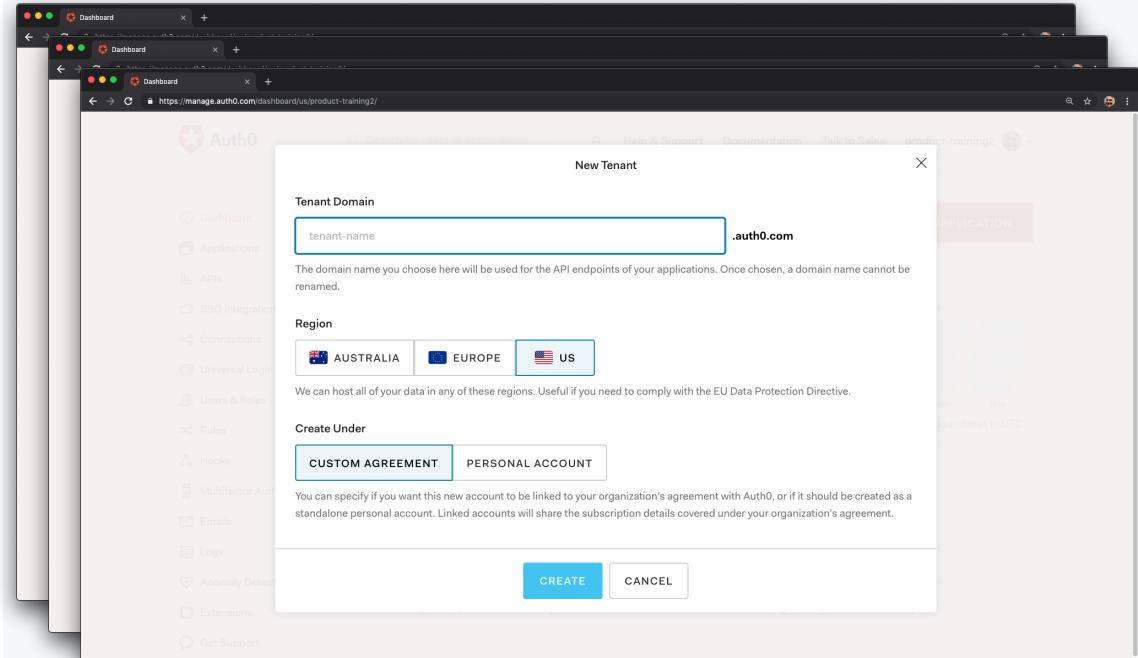

company-sandbox-3

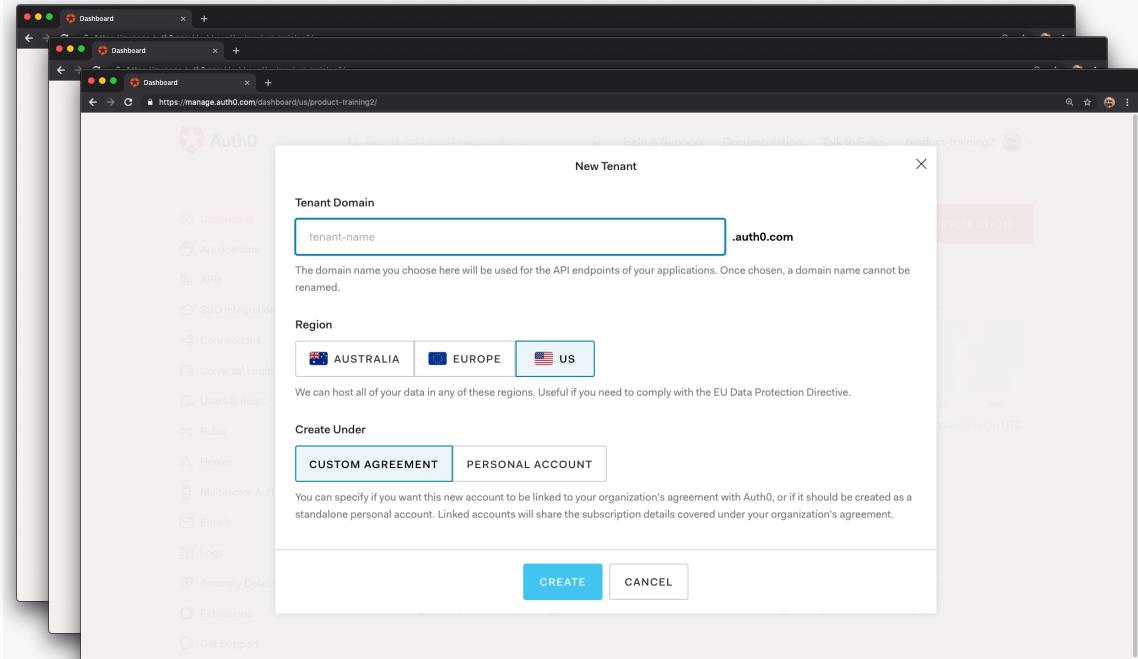

Number of Tenants

- Create as many as you need
- All features on only 3

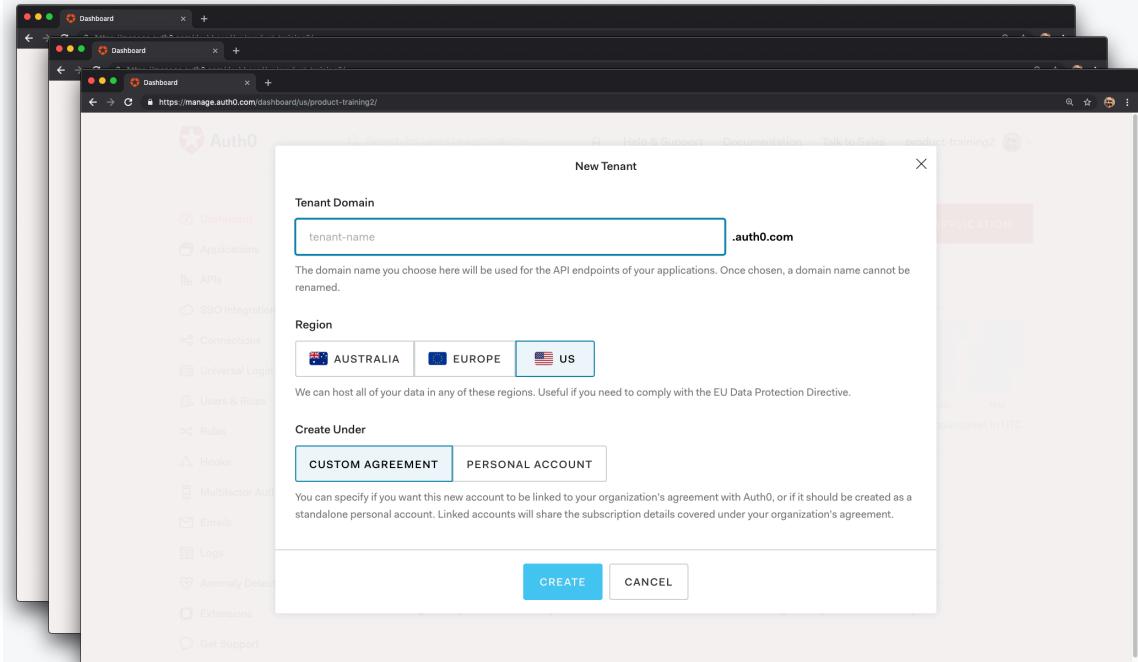

Naming of Tenants

- End user focused
- Logical

Naming Patterns

- company-prod
- company-employees
- company-sandbox-1

You won't be able to change a tenant name once you create them, or use them again if you delete them.

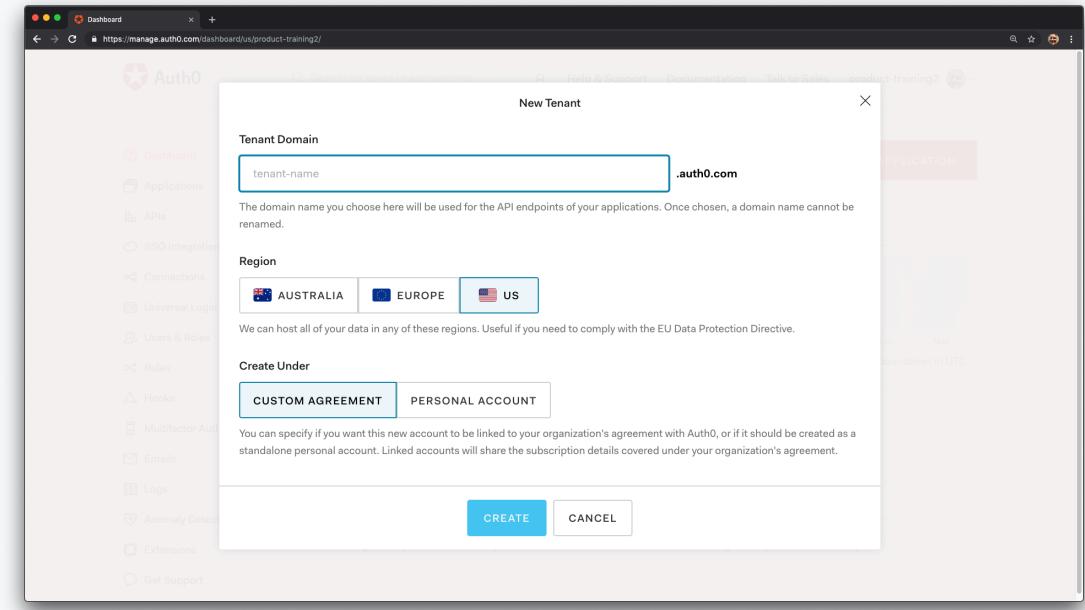

Architecture: Setting up Your Auth0 Tenant

Introduction

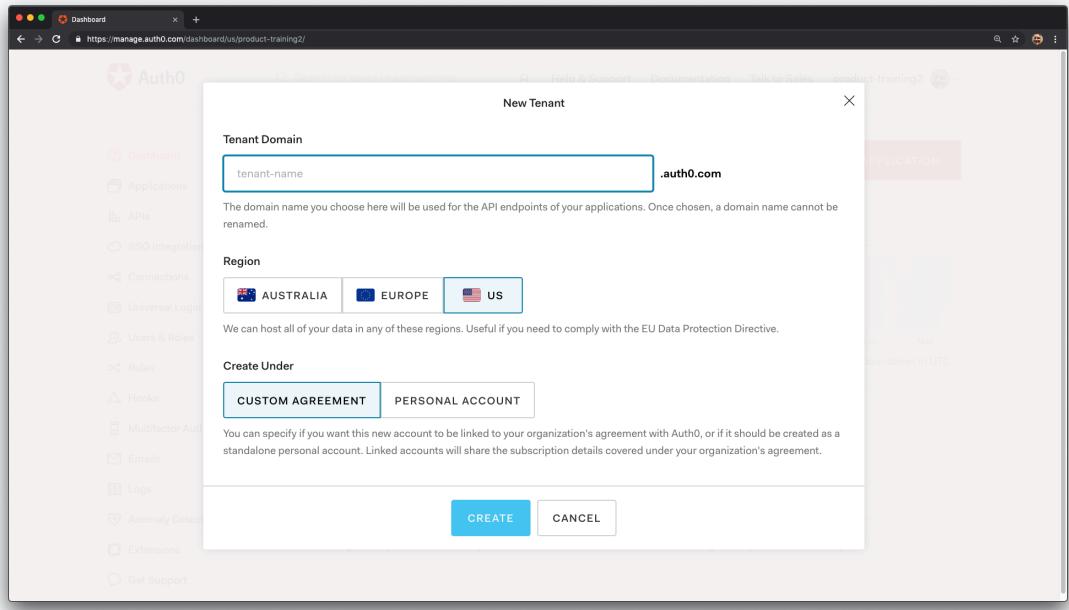

Auth0 Tenants

- What a tenant is
- How to configure
- How many are needed

Auth0 Tenants

- Naming
- Accounts
- Cost savings

Next up, provisioning users.
